# 1. General

This document introduce the USB camera in PI Series HMI, it contains how to set this function when programming, recommended USB camera model and some points for stable use.

# **2. PI8000**

PI8000 can support the USB camera up to 800\*480 resolution. The recommended configuration is as below:

eneral						
🔘 Net (	amera		(	) USB C	amera	
Resolut:	ion	(	640x480		Ŧ	
🔲 Vse re	esoluti	,	640x480		•	
🔲 Use re Positio	soluti n	on size			T	
🔲 Vse re	esoluti	,	640x480 0		T	
🔲 Use re Positio	soluti n	on size			T	

### 3. PI9000

PI9000 can support the USB camera up to 1280\*720 resolution. The recommended configuration is as

#### below:

I ELUN

Camera di	splay					×
General						
) Net	. Camera			VSB C	amera	
Resolu	ution	(	1280x720	)	•	
	resoluti	on size				
-Posit X	ion O	Y	0			
Size		1				
Widt	h 1024	Height	600			

# 4. Recommended USB camera model

All below USB camera model have been tested by WECON to ensure the compatibility.

- 1) REB-USB 100W07M (supports 720p)
- 2) WX152HD (supports 720p)
- 3) RMONCAM G200 (supports 720p)
- 4) ASHU S300 (640\*480)
- 5) (we are testing more USB camera, the list will keep updating)

# 5. Some points for stable use

- 1) One HMI can only connect with only one USB camera, and only one camera device is allowed in the HMI project.
- USB hub is not allowed, the USB camera need to connect with the HMI directly. When using the USB
  WECON Technology Co., Ltd.

camera, no hot plug operation is allowed.

- 3) From 2018, only some special version pi8000 and PI9000 HMI can support USB camera, general version pi8000, pi9000 and all pi3000 cannot support USB camera function.
- 4) If user need to use the extension line, the length is limited within 5 meters and the extension line should has a magnetic ring.
- 5) Sometimes the USB camera may lose the image because of the noise in the field, then we suggest to pi9000 HMI and the recommended USB camera model.
